"Organization of a Clostridium thermocellum gene cluster encoding the cellulosomal scaffolding protein CipA and a protein possibly involved in attachment of the cellulosome to the cell surface.";
J. Bacteriol. 175:1891-1899(1993).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DOMAIN: CONTAINS 9 COPIES OF A DOMAIN (COHESIN) OF ABOUT 150 RESIDUES THAT BINDS TO THE DOCKERIN DOMAIN BORN BY THE CATALYTIC COMPONENTS OF THE CELLULOSOME.

DOMAIN: A 24 RESIDUES DOMAIN IS REPEATED TWICE IN THIS ENZYME AS WELL AS IN OTHER C.THERMOCELLUM CELLULOSOME ENZYMES. THIS DOMAIN MAY FUNCTION AS THE BINDING LIGAND FOR THE SL COMPONENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE-97238934; PubMed-9083107;

Gen. Microbiol. 139:307'316(1993).

-! FUNCTION: THIS ENZYME CATALYZES THE ENDOHYDROLYSIS OF 1,4-BETA-GLOCOSIDIC LINKAGES IN CELLULOSS. LICHENIN AND CEREAL BETA-D-GLUCONIS. PRINCIPALLY ACTIVE AGAINSY BARLEY BETA-GLUCCAN.
-! CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose.
-! PATHWAY: CELLULOSE DERRADATION.
-! PATHWAY: CELLULOSE DERRADATION.
-! SIMILARIII: BELONGS TO CELLULASE FAMILY E (FAMILY 9 OF GLYCOSYL
                                                                                                                                                                                                                                        877 YKNNDSAPGDNQIKPGLQVVNTGSSSVDLSTVTVRYWFTRDGGSSTLVYNCDWAAI----

-!- FUNCTION: THIS PROTBOGLYCAN IS A MAJOR COMPONENT OF EXTRACELLULAR MATRIX OF CARTILAGENOUS TISSUES. A MAJOR FUNCTION OF THIS PROTEIN IS TO RESIST COMPRESSION IN CARTILAGE. IT BINDS AVIDLY TO HYALURONIC ACID VIA AN AMINO-TERMINAL GLOBULAR EGGION. MAY PLAY A REGULARORY ROLE IN THE MATRIX ASSEMBLY OF THE CARTILAGE.
-!- SUBCELLULAR LOCATION: SECRETED; EXTRACELLULAR MATRIX (BY

It is produced through a collaboration
SIMILARITY).

DOMAIN: TWO GLOBULAR DOMAINS, G1 AND G2, COMPRISE THE AMINO TERMINUS OF THE PROTEOGLYCAN, WHILE ANOTHER GLOBULAR REGION, G3, MAKES UP THE COOH TERMINUS. G1 CONTAINS LINK DOMAINS AND THUS CONSISTS OF THREE DISULFIDE-BONDED LOOP STRUCTURES DESIGNATED AS THE A, B, B' MOTIFS. G2 IS SIMILAR TO G1. THE KERATAN SULFATE (KS) AND THE CHONDROITIN SULFATE (CS) ATTACHMENT DOMAINS LIE BETWEEN G2 AND G3.
                                                                                                                                                                                                                                                                             THE CONTAINS MOSTLY CHONDROITIN SULFATE, BUT ALSO KERATAN SULFATE CHAINENS, N-LINKED AND O-LIORGASCHARTEDES.

DISEASE: DEPECTS IN AGC1 ARE THE CAUSE OF CARTILAGE MATRIX
DEFICIENCY (CMD), AN AUTOSOMAL RECESSIVE SYNDROME CHARACTERIZED BY CLEFT PALAFE, SHORT LIMBS, TAIL AND SNOUT: MUTATION IN STRAIN CMD CAUSES ABSENCE OF AGGRECAN BY TRUNCATION OF THE PROTEIN (MUTATION IN THE G1 DOMAIN).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -i- SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE V-TYPE DOMAIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The more significant matches with motifs in the PKUSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for each CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(23:4768-4788|1994)) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/
jun/cgl-bin/framePlot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon. The may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions. Cosmid 577 lies between left and 485 on the Asel-A genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /db_xref="SPTREMBL:086698"
